

Index of Personal Names
to Abdel-Moneim Abu-Bakr, *Excavations at Giza 1949-1950*

by Henry G. Fischer

Although only nine of the Giza tombs published by Abu-Bakr contained inscriptions, the nine tombs have yielded a great many names--eighty-three in all. This onomastic source is particularly interesting since nineteen of the names are at least marginally different from Ranke's compilation, and another sixteen are attested so rarely that further evidence is welcome. It is therefore to be regretted that Abu-Bakr's publication is indexed only for titles. To repair this omission, the present index has been printed separately and concisely, so that it may be inserted in copies of the book.
