## Preface

In preparing this publication I have once again been able to count on the editorial assistance of Janet Thorpe and on the typographic skill of Bert Clarke, which has been sorely tested by the intricacy of the layout. He has succeeded so well, indeed, that its elegance may belie the fact that this is essentially a random collection of notes, brought together for use in the classroom. Thanks to the unfailing generosity of Lila Acheson Wallace, its price will nonetheless place it within the means of students; and, in defense of its stately appearance, it may fairly be argued that no degree of elegance can do justice to that of Egyptian hieroglyphs when executed at their best.

## Preface to the Second Edition

Contrary to expectations, the original edition of 2000 copies has been exhausted after three years. A considerable number of worthwhile marginalia have accumulated even in so short a time, but by no means enough to justify a reorganization of the main text. Only a few changes have been made in this portion of the book, most of the additions being relegated to the Addenda and terminal references, where the pagination has necessarily been revised.

While the simplified hieroglyphic examples have scarcely been modified (only $\mathrm{G}_{5} 1$, T25 and $V_{1} 8$ ), several additional variants of ancient models have been provided. It has been possible to insert a few of these in the main text $\left(\mathrm{O}_{28}, \mathrm{~T}_{25}, \mathrm{U}_{23}, \mathrm{~A} 220\right)$, and the Addenda may be consulted for the remainder.

At the very last minute an additional simplified hieroglyph has been replaced (G39), following, in part, a criticism of M.-Chr. Van Hamme-Van Hoorebeke in a review that appeared as this edition was in the hands of the printer (BiOr 39 [1982]).

## Preface to the Third Edition

Only a single new variant (T25, Fig. c) has been added to the main text, which contains no more than a few other additions ( $\mathrm{G}_{17}$, $\mathrm{D} 21, \mathrm{~F} 96, \mathrm{I6}$ ) and minor readjustments. Wherever possible, in this section of the book, references have been introduced to the Addenda, which have again been augmented, as have-to a lesser extent-the terminal references. But the Addenda now contain remarks on several signs that are not listed as such in the main text: 舅 (A9) ,

## Preface to the Fourth Edition

The production of the present edition was very nearly precluded by the loss of the photographic "flats" prepared by the Press of A. Colish, which no longer exists. It is a tribute to Peter Der Manuelian that he has been able to reconstitute them on the computer, and to follow the design of the earlier editions so faithfully.

Nearly all of the relatively few changes in this edition refer to my Egyptian Studies III, and most of these are to be found in the Addenda, which contain additional comments on @
 (Aa2o). And the detailed Old Kingdom example of $\quad$ (N28), which unaccountably disappeared from the third edition, has been restored.

## Ancient Egyptian Calligraphy

## Introduction

IF my use of the term "calligraphy" may seem pretentious, it nonetheless states my aim, which is to encourage a better standard in writing Egyptian hieroglyphs. This emphasis is rather different from that of Johanna Dittmar's recent Hieroglyphen-Schreibfibel, which primarily seeks to simplify the signs to the point that they can be easily executed. In either case the result is something of a compromise, for I too have proposed a degree of simplification that may not always correspond to what the ancient Egyptians would have done. That is inevitable, since the ancient scribe would not ordinarily have written hieroglyphs in ink without simplifying them to a still greater degree. ${ }^{1}$ Artificial as it is, the style adopted here nonetheless seeks to avoid forms that are alien or grossly inaccurate.

Some may feel, indeed, that the standard set here is too high. It seems preferable, however, to attempt a shaky fidelity to form rather than be satisfied with a sure-handed circumvention. By doing so, we shall at least keep the ancient model in mind, rather than blinding ourselves to it. If one makes such an effort, he will be rewarded by an increased appreciation of Egyptian draftsmanship and will acquire a sensitivity to palaeographic variations that may be of value in establishing date and provenance. And he will also, if sufficiently conscious of what he is drawing, acquire a considerable knowledge of iconography, in view of the fact that Egyptian art and writing are extraordinarily interrelated and complementary.

My selection of signs emphasizes (1) those that most require practice, (2) those whose form particularly requires explanation, (3) those that require additional comment, supplementing the remarks of Sir Alan Gardiner in his Sign List (Egyptian Grammar, third edition, pp. $43^{8-548)}$. The last two objectives are primarily accomplished by the addition of many Old Kingdom examples, and a few of later date, so as to give a somewhat fuller idea of the range of possibilities (and here it should be emphasized that an earlier form may unexpectedly reappear in inscriptions of a subsequent period). At a few points I have also indicated errors of orientation ( $\mathrm{P}_{2}, \mathrm{P}_{5}, \mathrm{U}_{24}{ }^{-25}$ ) or of accuracy ( $\mathrm{A}_{49}, \mathrm{D}_{5} 6, \mathrm{G} 27, \mathrm{G}_{47}$ ), or have given somewhat different interpretations (A48, A49, D45, E31, F35, G51, M3, N18, S23, S34, T4, T13, U23, Aa31). In some other cases the prescribed simplification of Gardiner's hieroglyphs calls for the emphasis of a detail such as the long tail of the cormorant (G35) or the long nose of the oxyrhynchus fish $\left(\mathrm{K}_{4}\right)$. There are also some observations concerning the date when certain forms were introduced.

To facilitate comparison, the facsimiles of hieroglyphs have been drawn to uniform size

[^0]some of the alphabetic signs: $\mathrm{G}_{43}, \mathrm{O}_{34}, \mathrm{~N}_{37}, \mathrm{D}_{4} 6$, with which some others might be included: $\sqrt{2}\left(\mathrm{D}_{5} 8\right), \ldots(\mathrm{I} 9),{ }^{2}(\mathrm{I} 10)$. Similarly, among the other signs, $\mathrm{A}_{1}$ and $\mathrm{W}_{1} 7$, to which one may add $¥, \mathrm{H}_{2}$ ( $\mathrm{M}_{3} 6$ ), with the leaves separate and parallel.
and reversed，wherever necessary，so that they correspond to the orientation of the Gardin－ er font：the＂shadow line＂has also been eliminated from those copies in which it appears． The references to these examples are given at the end，and the reversals are marked with an asterisk（＊）．In some cases the nature of an implement has been illustrated from scenes of daily life－again nearly always dating to the Old Kingdom－and the references to these are combined with those given for the hieroglyphs．

My presentation of the signs begins with the monoconsonantal series－the so－called al－ phabet－which must be mastered at the outset，and which，for this reason，has been given special attention．The other signs follow the normal sequence of letter and number．

Each item is identified by the Gardiner type（which is much less clearly printed in the third edition of the Egyptian Grammar than in the original letterpress edition），then the Sign List reference，a descriptive phrase，and finally the phonetic value that is most fre－ quently associated with the sign in question．

Before examining the changes and variations in the hieroglyphs，the student should be aware of certain general considerations that affected their form or proportions：
（1）The transposition，for aesthetic reasons，of groups such as $\delta>$ 红 in $3 h t$＂field＂is described by Gardiner（Egyptian Grammar，$\$ 5^{6}$ ），but it should be added that this rearrange－ ment derives from the composition of columnar inscriptions，where a tall thin sign in this position，preceding a bird，was often shortened．The same arrangement was sometimes car－ ried over into horizontal inscriptions，where there was no need for it，but the initial sign was then less apt to be shortened．The increasing use of horizontal lines also affected the proportions of signs in other ways；it is doubtless responsible for the more elongated net－sign（T24）which tended to replace the narrower Old Kingdom form is

Thus the relative size of the sign may be affected by the space available，and this con－ sideration is in turn affected by the way the signs are grouped．The same factors may even， in some cases，alter the proportions of a sign：e．g．$\square ।$ as compared with $\square\left(\mathrm{O}_{1}: T i, \mathrm{pl} .99\right)$ ， and cf．also the comments on $\square\left(\mathrm{O}_{4}\right)$ ．Occasionally the relatively larger scale of a hiero－ glyph may serve to emphasize its importance as pointed out in Caminos and Fischer，Epig－ raphy and Palaeography，pp．35－36．See also the comments on（G36）and 通（ $\mathrm{B}_{1}$ ， Addenda）．
（2）The avoidance，in funerary texts located near the body，of human figures or certain animals，was initially responsible for the substitution of 行（D6o）for older（A6），and of $\&\left(\mathrm{R}_{14}\right)$ for（ $\mathrm{R}_{13}$ ）；so also，as Gardiner points out，the use of $\left(\mathrm{S}_{3}\right)$ for（ L 2 ）．For details of the last two cases see Caminos and Fischer，Epigraphy and Palaeography，p． 33 and note 21 ，p． 47 and note 69．And for is see Addenda，p． 54 below．
（3）A certain degree of meaningless stylization was operative in some cases，such as $\mathbb{N 1 4}$ （D61）and the replacement of（T20）by later（T19）．For the latter see Egyptian Studies I， pp．104－107．
（4）Throughout the history of Egyptian hieroglyphs there was a progressive increase in the use of composite forms，such as 其（ $\mathrm{P}_{7}$ ，Middle Kingdom and later）or（G2o，New

Kingdom onward，but see Addenda）．This evolution is described in MMJ 12 （1977）pp．5－ 19.
（5）In reversed inscriptions，with the signs facing leftward，some signs occasionally retained their normal rightward orientation（Egyptian Studies II，§38）．This phenomenon
 explains as a nonreversal of what should be 躳（Y3）．In a very few cases the retention of right－ ward orientation might affect only part of the sign；e．g．$\&$ for $\leftrightarrow$（T21），as exemplified in Mohamed Saleh，Three Old－Kingdom Tombs at Thebes，pls．14，18；the same explanation is doubt－ less to be applied to Gardiner＇s（D62），replacing（1410（D61），for this too occurs in an in－ scription facing left（Rekh－mi－Rēs，pl． 27 ［20］）．Some New Kingdom examples of also show partial reversal．Semi－reversed $\mathbb{m}_{0}$ is common in the Old Kingdom and down to Dynasty XI；see Egyptian Studies III，pp．194－201．
（6）Cursive writing sporadically influenced the forms of hieroglyphs，and not only hieratic （for which cf．Gardiner，Egyptian Grammar，p．439），but also the semi－cursive style of incised hieroglyphs described in Caminos and Fischer，Epigraphy and Palaeography，pp．40－42．This ex－ plains the occasional use of forms such as $\$ for $\\left(\mathrm{M}_{17}\right)$ or $m$（Borchardt，Grabdenkmal Ne－user－ rer，pl． $1_{5}$ ；Rekh－mi－Rē厄，pl．102）for $\curvearrowleft$（N28）；the hieroglyphic style normally reduces a series of projections to a continuous and unbroken contour．
（7）Graphic assimilation tended to be operative only in specific cases（e．g．the nome em－ blem of U．E．2，JARCE 2 ［1963］p．49；and cf．the remarks on A47 below）．But it sometimes had a more lasting effect，as in the case of $\ddagger$（ F 35 ），which was partly assimilated to $\square\left(\mathrm{F}_{3} 6\right.$ ），or $P$（G28），which，in the late New Kingdom，sometimes shows the head bent low as in the con－ temporaneous 展 $\left(\mathrm{G}_{52}\right)$ ．For other examples，see the remarks on $\rightarrow\left(\mathrm{O}_{34}\right), \Downarrow\left(\mathrm{T}_{13}\right)$ and $\mathbb{\square}$ （T28），and the supplementary references for（M26）；also Addenda：${ }_{d}, \downarrow$（M12，M22）．
（8）The forms of signs are affected by changes of technology（e．g．tools and weapons）and of fashion（e．g．clothing and furniture）；also，in some cases，by the iconographic context of an inscription；both points are illustrated in Egyptian Studies III，pp．225， 186 （and Fig．7）and in Caminos and Fischer，Epigraphy and Palaeography，pp．34， 37 and n． 37.

Those who wish to make further palaeographic comparisons may find it useful to have a checklist of sources．${ }^{2}$ The following compilations of detailed facsimiles are available，some in color（col．），the remainder in black and white．

## ARCHAIC PERIOD

Hilda U．Petrie，Egyptian Hieroglyphs of the First and Second Dynasties（London，1927）．

## NEW KINGDOM

(Deir el Bahri) F. Ll. Griffith, Collection of Hieroglyphs, pls. 1-4 (col.).
(El Kab) Ibid., pls. 5-6 (col.).
(Theban tombs) Nina M. Davies, Picture Writing in Ancient Egypt (London, 1958) (col.).
In addition to such compilations one may, of course, find much more material in the various publications of hieroglyphic inscriptions, but these are sometimes lacking in respect to

[^2][^3]fidelity or detail. ${ }^{6}$ For the Archaic Period a good source is Peter Kaplony's Die Inschriften der ägyptischen Frühzeit III (Wiesbaden, 1963). ${ }^{7}$ For the Old Kingdom there are Henri Wild's drawings of the mastaba of Ti (cf. note 3 above); for the Middle Kingdom abundant material may be found in Wm. C. Hayes, Texts in the Mastabeh of Se'n-Wosret-ankh; and for the New Kingdom one may rely on the numerous epigraphic works of Norman de Garis Davies.

In conclusion, it should be emphasized that this introductory guide is designed to supplement Gardiner's Sign List, and to stimulate the student's interest in that superb analysis and exposition of the subject. In championing a better standard of Egyptian calligraphy, I am again simply reaffirming a tradition set by Gardiner and his colleagues-notably Battiscombe Gunn and Norman de Garis Davies. The proper way to honor a tradition is to improve upon it, and it is my hope that future teachers and students of ancient Egyptian will be inspired to make a conscious effort in that direction.
6. This criticism is sometimes applicable, for example, to the drawings in Junker's Gîza. One cannot help wondering about the validity of $\mathrm{Y}_{1}$ ), rather than the expected Old Kingdom form $-\left(\mathrm{Y}_{2}\right)$, in Meir V, pls. 6, 8. Problems of this kind (and others) are also encountered in the damaged texts recorded by Alexander Badawy, The Tomb of Nyhetep-Ptah at Giza
and the Tomb of ‘Anthm‘ahor at Saqqara (Berkeley, 1978) figs. 2-

7. Although the compilation by no means constitutes a complete corpus, even to the extent of including everything on such publications as W. M. F. Petrie, Royal Tombs of the First Dynasty (London, 1900-1901).

## The alphabetic (monoconsonantal) signs

## N <br> 

G1 Egyptian Vulture, 3.

The outline is most easily controlled if one begins with the head, then draws the front of the bird, continuing with the rearward leg. If this much is correctly executed, it is relatively easy to add the rest. Note the sharp angle at the back of the head, which is explained by the fact that the feathers in that region tend to stand out, particularly if fanned by a breeze. The facsimile shows this detail in an Old Kingdom example, accompanied by the same detail as seen from a living specimen (Figure b).
\& M17 Flowering Reed, i.

The upper part widens slightly at the bottom. Old Kingdom examples (and those of later date) often represent the flowering portion as a series of striations; the joints in the stem were rarely indicated in the Old Kingdom (Figure b), but appeared more frequently thereafter.

## - D36 ARM, .

b (м.к.)

The Old Kingdom form shows the full breadth of the palm. Later the palm tended to be slightly cupped, as in Gardiner's version. Even in the New Kingdom all the fingers are clearly distinguished in the most detailed examples (e.g. Ken-Amūn, pl. 13), but this is also true of signs such as a $ـ$ (D39). And the most detailed New Kingdom examples often show the hand as in the Old Kingdom (e.g. Ramose, pl. $4^{2}$ ).

## If G43 QUAIL CHICK, w.

The most difficult of the bird-hieroglyphs. The shape is easier to control if the angularity of the body is emphasized. If drawn quickly, the head tends to be summarized, and this summarization actually occurs in semi-cursive writing: $\$$. The indication of the wing is optional.

## 』 $\mathrm{D}_{5} 8$ Foot, $b$.

As Gardiner notes, this sign was often very short in Dynasty 1 ( $\Omega$ ), and even in the Middle Kingdom was often shorter than the full height of the line.

## - Q3 Stool of Reed Matting, p.

The height is normally greater than the width. Old Kingdom examples often show the detail of matting, and from this period, down to the end of the New Kingdom, it was sometimes stylized as 团: Egyptian Studies I, pp. 109 ff .

## $\ldots \quad$ I9 Horned Viper, $f$.

The rise of the body is slight, and the tail remains flat on the ground.

Of all the bird-hieroglyphs, this one is the easiest to draw, and it is therefore a good choice for the beginner to practice. The procedure is the same as has been suggested for the Egyptian vulture ( $\mathrm{G}_{1}$ ). The owl is distinguished from all the other birds in that its head is turned to one side, and is viewed full-face. Another distinctive feature is the fact that the hind toe (which is reversible) does not appear. The indication of the wing is optional; so too the summarization of the eyes and beak. Gardiner cites Keimer and Newberry for
discussions, but does not supply the references: Keimer, Annals of the Faculty of Arts, Ibrahim Pasha University, Cairo, I (1951) pp. 73-83; Newberry, JEA 37 (1951) pp. 72-74.

- N 35 Water, $n$.

The number of angular ripples is variable, but the two ends always slant downward. These terminal strokes may be a little longer than the others.

- D21 MOUTH, $n$

When carefully executed, this sign often shows a pronounced narrowing at the corners, as in the Old Kingdom example illustrated here, and the top is more curved than the bottom (cf. Davies, $B M M A$, March 1918, Sect. II, p. 18).

## ■ O4 COURTYARD, $h$.

In the Old Kingdom this sign is often taller than it is wide, although it may also resemble the square Gardiner version. This is one of the signs that is most apt to change its proportions, depending on the amount of space available; compare the group , pl. 47; I, pl. 7o), ل品 (II, pl. 86).
\& V28 WICK, h.

lamp and wick

The procedure shown here is ultimately easier than drawing a series of loops, one above another, and it is closer to ancient examples. The uppermost loop is often larger than the others. The use of the twisted flax is well illustrated by an Old Kingdom lamp.

## - Aaı Placenta (?), h.

The striations should be horizontal, as is usual in examples down to the end of the New Kingdom. The second form (as in the Theinhardt font) occurred only rarely before the Libyan Period: Caminos and Fischer, Epigraphy and Palaeography, p. 49, note 78. The third form, with crosshatched detail, is typical of the Archaic Period but recurred occasionally in the Old Kingdom (Fischer, Coptite Nome, p. 20). The interpretation of the sign is disputed by Curto, Aegyptus 39 (1959) pp. 226-261.

The belly and tail of a mammal, viewed from the underside.

O34 Bolt, z.

Most Egyptologists use the form shown here, although the ancient Egyptians summarized the protuberances by using a pair of rounded dots rather than two short strokes. The operation of the bolt is shown in Figure c: the protuberances at the center limit the degree to which it can slide back and forth between the two fastenings at the right; when the bolt is pushed leftward, beneath the third fastening, the door is locked. Some Old Kingdom examples (Figure b) seem to show a string placed between the protuberances, but it is doubtful that the bolt was ever secured in this fashion; see Graefe, MDAIK 27 (1971) pp. 148 ff. Old Kingdom names sometimes show $-\infty$ in place of $-\infty$ (R22-23), referring to the god Min (Orientalia 6o [1991] 296-297).

a

b

detail of dummy door

## § S29 Piece of Cloth, s.

This may be drawn with a single line, beginning at the bottom, but a more controlled result may be obtained by drawing the longer part downward, then adding the remainder. For the interpretation of this sign cf. $M M J 10$ (1975) pp. 14-16.

## - N37 Pool, š.

The second form (as in the Theinhardt font) was rarely used in hieroglyphic inscriptions until the Late Period, but it is known from hieratic of the Old Kingdom and later, and occurred occasionally in semi-cursive hieroglyphs of that date. The detailed Old Kingdom example (Gardiner's N39) shows vertical ripples of water. See also Addenda.

## $\triangle \quad$ N29 Hill, $k$.

© Wil Ringstand, $g$.

The Old Kingdom form generally shows the bottom edge straight as well as the top one: ® (W12). The later form (very rarely evidenced in the Sixth Dynasty: Fischer, Dendera, p. 89 [9]) shows the bottom curved, as though viewed from above. This implement was used for "seating" round-bottomed pots, as shown in the accompanying figure.
jar on a ringstand

- Xi Loaf, t.

Almost a hemisphere.
$=$ V13 Tethering Rope, t.

Draw the loops first.
$-\mathrm{D}_{4} 6$ HAND, $d$.

The first alternative is usually preferred by Egyptologists, and something like this was used by the ancient Egyptians in semi-cursive hieroglyphic texts.
$\}$ Iıo COBRA, $\underset{\sim}{d}$.

The back thickens towards the point where the tail curves downward. This effect may also be obtained simply by raising the line of the back at the same point.

## Other signs（arranged by category）

## 次 Ai Seated Man．

Both arms must be flexed，and the rearward arm must meet or overlap the body．The hands（if indicated）are fisted．As in the following signs，even the most simplified forms， such as $\stackrel{\sim}{\perp}$ ，do not turn the head into a circle．

## 需 A2 Man with Hand to Mouth．

Unlike Aı，the rearward arm is pendant．These two signs are not always clearly distin－ guished in inscriptions of the Heracleopolitan Period，and A2 was therefore sometimes replaced by ${ }^{\text {h }}$ to make the distinction clearer（ $R d E 28$［1976］pp．153－154）．

## 舄 A3 Man Sitting on Heel，hmsi．

## 酉 $\mathrm{A}_{7}$ FATIGUED MAN，wrd．

## 筑 A12 SOLDIER，mš．

Variants of the Heracleopolitan Period show the figure drawing the bow（JNES 21 ［1962］ pp． $5^{0-52)}$ ．

A19 OLD MAN，smsw，$c_{3}$ ，wr．

The rearward arm is slightly flexed．For the various readings see Egyptian Studies I，pp．88－93．

## 高 <br> A2 1 COURTIER，sr．

The rearward arm is straight．

A2 4 Man Striking，hwi．

The stick is normally straight in examples prior to the Middle Kingdom；in Middle Kingdom examples it is usually curved（Fischer，＂Notes on Sticks and Staves，＂p． 12 and note 36）．Old Kingdom writings of hwi sometimes show the stick beating the sign \＆（V28：MMJ 12 ［1977］p． 9 and fig．4b）．See also Addenda（A25）．

A4o Seated God．

Make the back of the wig vertical．The beard is slightly curved at the tip．From Dyn．XII onward the figure sometimes held $f\left(\mathrm{~S}_{34}\right)$ as in the case of ${ }^{2}(\mathrm{C} 2)$ ；see $Z \ddot{\mathrm{~A}}$ S 100 （1973）p．26，note 55 ．

A47 Herdsman，mizu，zzw．

In the Old Kingdom example shown here the herdsman carries a staff and goad（for which see Vandier，Manuel d＇archéologie VI， pp．48－49）．From the Heracleopolitan Period onward（Fischer， Dendera，p．133）the sign was used for iry（ZÄS 105 ［1978］p．55， note 7o）．The distinction between this and $\left(\mathrm{A}_{4} 8\right)$ is nonexist－ ent，the latter being nothing more than a variant of the same sign．The supposed Old Kingdom prototypes of 448 are actually to be read differently：，． 8 is hnmt（Junker，Gîza XII，pp．120－122），while $\mathcal{D}$ is to be read htst（Fischer，in Simpson Studies 1，pp．273－274）．Old and Middle Kingdom examples occasionally show assimilation of the stick and goad to the feather $(\beta)$ that is held by the foreigner in A49：Fischer，＂Notes on Sticks and Staves，＂figs．12，13；also in a writing of the feast 䀧圌四，Beni Hasan I，pl． 24. See also Addenda（A48）．

## A A49 Foreigner Holding Stick.

Gardiner's version shows a curved stick, but in the clearer of his two examples (Urk. IV, p. 614) this is actually a throwstick () $\mathrm{T}_{14}$ ); so also Brunner, Die südlichen Räume, pl. 162, and probably Urk. IV, p. 759 (1). The more traditional form of the older periods shows a feather: Clère, MDAIK 16 (1958) pp. 40-41, and Fischer, "Notes on Sticks and Staves," note 41.

## 

The front legs of the chair are covered by (or fused with) the legs of the man.

## 霄 $\mathrm{A}_{5} 1$ Seated Man with Flagellum.

Contrary to Gardiner, this is not the normal ideograph for $\check{s} p s(s)$; used thus, it is a secondary substitution for $A_{5}\left(\mathrm{~A}_{5} \mathrm{O}\right)$. It was initially used as a name-determinative, applied to kings at the beginning of Dyn. XII, then to nonroyal individuals at the end of the same dynasty (Lexikon der Ägyptologie II, col. $5^{16}$ ). An early example of $\mathrm{A}_{5} 1$ for ${ }^{5} p s$ (temp. Sesostris III) occurs in Meir VI, pls. 18-19.

## 』 $\mathrm{A}_{53}$ Mummy.

Not used until the Middle Kingdom.

## $\rightleftarrows \mathrm{A}_{55}$ Mummy on Bier.

The Old Kingdom form probably shows, in most cases, a man sleeping, but it is often similar to Gardiner's version.

## 虹 $\mathrm{A}_{5} 6$ Seated Man with Stick.

Used in the Old Kingdom as determinative of bsk, etc.: for examples see MDAIK 16 (1958) pp. $135^{-137}$ and fig. 3 .

## 通 $\mathrm{Bi}_{1}$ SEATED WOMAN.

The back of the wig should be vertical (as in the case of A4o). See also Addenda.
@ Di HEAD, $t$.

The style of the wig varies (JAOS 76 [1956] p. 103). The one shown here (longer than in Gardiner's example) is more common in the Old Kingdom.

## § $\quad \mathrm{D} 2$ FACE, $h$ r.

Although the face is that of a man, with a squared-off beard, it is traditionally colored yellow: Smith, History of Egyptian Sculpture and Painting in the Old Kingdom, p. 375.
$\propto \mathrm{D}_{4}$ EyE, $\operatorname{ir}(t)$.

In drawing the upper edge, make the curve steeper at the front. The lower edge is almost horizontal, forming a slight curve. As a rule the pupil is partly covered by the upper lid, and does not stare.

## Dıo EyE OF HORUS, wd $3 t$.

The vertical element represents the dark patch that appears beneath the eye of the falcon; the spiral is a stylization of the pattern of feathers behind this patch.

## E D2o NOSE, fnd.

D33 ARMS PaddLING, $\underline{n} n(i)$.

The upper element has been explained as a fire-fan ( $-\underline{-h n w): ~ J u n k e r, ~ G \hat{z} z a ~ I X, ~ p p . ~ 44-47 . ~ T h e ~ a l t e r n a t i v e ~}$ form (Figure b), in which $\nabla$ is replaced by $\varnothing$, is fairly common in the Old and Middle Kingdoms, less so in the New Kingdom: MMJ 12 (1977) p. 10, note $5{ }^{1}$.

D45 ARM HOLDING MKS-STAFF, $d s$.

a

Old Kingdom examples show a pair of arms holding the $m k s$-staff, but the Gardiner form may, as he says, show the shorter nhbt, which is otherwise similar (Fischer, "Notes on Sticks and Staves," $\S 9$ ). The New Kingdom form was at least occasionally interpreted as a head of lettuce; the example illustrated here (Figure b) dates to the reign of Tuthmosis IV. In such cases the lettuce is colored green. See also Addenda.

## $\wedge$ D54 LEGS WALKING.

The legs occasionally show a kilt in inscriptions of the Old Kingdom and later (JARCE 4 [1965] p. $5^{\circ}$ [a]). A somewhat longer pair of legs sometimes replaces $\AA$ (W25) in Old Kingdom inscriptions (BiOr 33 [1976] p. 29, note 5). For uses of the reversed legs ( $\mathrm{D}_{55}$ ) see Egyptian Studies II, $\S \S 4^{1-4^{2}}$, and for the kilt see also the Addenda.

』 $\mathrm{D}_{5} 6 \mathrm{LEG}, r d$.

The relative shortness of this sign in the Gardiner font is difficult to justify．It may be based on examples such as Rekh－mi－Rēe，pls． 15 （21）， 16 （12），but these，and a few other such cases，occur in columnar inscriptions，where the height of the signs is vari－ able．A more valid example，in a horizontal line，is to be seen ibid．，pl．17，but else－ where，in the same period，the sign is taller：Nina Davies，JEA 47 （1961）pl．5；Two Sculptors，pl． $1_{5}$ ；Puyemrê II，pl． 66 （frag．1）；Ken－Amūn，pls． 8 （14），6o；Private Tombs I， pl．11．For tall examples of the Middle Kingdom see Newberry and Griffith，Bersheh I， pl．18；Beni Hasan I，pls．15，17；Lacau and Chevrier，Une Chapelle，pls． 12 （1），15，16， 19，23．It is true that the leg is often relatively short in Old Kingdom inscriptions，but these inscriptions again show a good deal of variation in the height of other signs；for tall examples see Bissing，Re－Heiligtum II，pl．4；Simpson，Mastabas of Qar and Idu， fig．29；Mereruka，pl． 67.
（141）D61 TOES，s s h．

Figure a is the somewhat more naturalistic exam－ ple cited by Gardiner（early Dynasty IV）；Figure b is early Dyn．V（Sahure）．For the anomalous form留，（D62）see above，p．5（5）．
${ }_{y \rightarrow T}$ Ei BULL，k3．

The rump of the animal projects so that the tail falls straight downward，free of the hindquarters．

的

Fry E8 KID，ib．See Addenda below．

## 

The nascent horns are usually omitted in Old Kingdom examples, but are shown in Simpson, Kawab, Khafkhufu I and II, figs. 31, 32.

## 㱒 E16 ANUBIS ON SHRINE, Inpw. <br> 

The shrine began to appear beneath Anubis in funerary formulae of the Sixth Dynasty (Pepy I onwards), and more regularly after the Old Kingdom: Fischer, Dendera, p. 84 (14).

The Old Kingdom form commonly shows a very long tail (descending below the baseline).

## E2 1 Recumbent Seth-animal, Sth.

E23 LION, ru.

Old Kingdom examples already show the end of the tail as the feathered end of an arrow, cf. WZKM 57 (1961) p. 60 and note 3 .

In beginning the lion, start with $\left(\mathrm{F}_{4}\right)$, which means "front," then continue to the back ( $\triangle$, [F2 1] meaning "rear") and finally the underside. Note, however, that in the tail curves around the haunch, while in $\otimes$ it curls up over the back, as in Archaic representations of the lion.

约 $\mathrm{E}_{3} 1$ GOAT with Cylinder SEAL, sch.

The animal was originally a kid, for the earlier Old Kingdom examples show nascent horns or none. The horns of the adult goat were added in the Sixth Dynasty (e.g. Fischer, Dendera, pl. 3o [b]), but the kid (as well as the goat) reappears in the shrine of Sesostris I at Karnak: Lacau and Chevrier, Une Chapelle, épigraphie pl. 6, and in inscriptions of the same period at Saqqara: Firth and Gunn, Teti Pyramid Cemeteries, pls. 83, 85 (2); also a late Dyn. XI ex.: Gardiner, JEA 4 (1917) pl. 8, line 5 . As Gardiner notes (in connection with $\& \mathrm{O}_{8}$ 20), this sign is sometimes replaced by the seal alone, and notably in funerary texts. Conversely, the seal was occasionally omitted from the goat: Clère, Miscellanea Gregoriana, p. 459 and note 27; also Davies, Antefoker, pl. 6; Beni Hasan I, pl. 33 (center [4]). The goat without a seal is also used, more appropriately, as an ideographic writing of $3 f$ - "greed" in Beni Hasan I, pl. 9 (so interpreted by Newberry, p. 27); this identifies the problematic determinative in Prisse I, 4 and 8 (cf. Gardiner, JEA 32 [1946] pl. 14 and note c). See also Addenda.

俞 ${ }^{8}$ E32 BABOON, icn.

E34 Hare, wn.

## F3 Head of Hippopotamus, $3 t$.

The eye projects, to allow the animal to see above the water when almost totally submerged. The small ear and rounded nose are equally characteristic. As Gardiner notes, this sign for ${ }^{3} t$ replaces an earlier one resembling © (F9); the later $3 t$ sign was in use as early as
the beginning of Dyn. XII (Davies, Antefoker, pl. 8; Hayes, Se’n-Wosret-ankh, pl. 5 [310]).

## 能 $\mathrm{F}_{5}$ HEAD OF Bubalis, $\check{s s s}(w)$.

The long muzzle and lyriform horns are characteristic.

Fg F7 RAM's HEAD, šft.

The ends of the horns are turned upward.

4 Fi2 Neck (OF CANINE), wsr(t).

The long neck should begin at a point midway between the ears. See also Addenda.

## \& F21 EAR (OF BULL?), sdim.

$\leadsto$ F23 Foreleg of Bull, $h p \check{s}$.

In the earlier periods, down to the mid-Eighteenth Dynasty, this form is preferred for $h p s$ meaning "strength," while $\simeq$ (F24) is used to refer to the foreleg as an offering (Egyptian Studies II, §43).

』 F25 Hoof (of Bull), whm (t).

Further evidence for the reading is given by Roccati, RdE 25 (1973) pp. 254-255.

## Fn F26 Skin of GOAT, $\underline{h} n(t)$.

Represents a headless goat; the body is angular, the short tail erect.

T, $\uparrow$ F27, F 28 COW'S SKIN.

The second sign, as Gardiner says, was regularly used for $s 3 b$ "dappled" (an exception in Clarence Fisher, Minor Cemetery at Giza [Philadelphia, 1924] pl. 51 [2]). The first was often used in Old Kingdom writings of the title 虾A iwn knmt (JNES 18 [1959] p. 267); this may represent the hide of some other animal, and in the same context it is once replaced by f (Urk. I, p. 231).

## TT* F29 Bull's Hide Pierced by Arrow, sti.

In the Old Kingdom the arrow does not reappear beyond the hide, and the tail is drawn more convincingly. So also the Middle Kingdom example in Hieroglyphs, pl. 9 (167), but the later form is attested as early as Dyn. XI: MDAIK 31 [1975] pls. 21-23. One Middle Kingdom example shows a shield impaled by two arrows ( $\mathbb{F}$, Meir I, pl. 2). See also Addenda.

F3o WATER SKIN, šd(w).

As Griffith notes (Beni Hasan III, p. 18, to fig. 46), this shows "the skin of the legs forming straps and the skin of the neck hanging down." But in the earlier example (a), the water-skin is evidently tied with cords.

## © F34 Heart, ib.

The normal form (a) may be compared to a sectioned sheep's heart (b). The second form (c) was often (but not always) used as determinative of $h_{3} t y$ in the Old Kingdom.

a

b (sheep's heart)

C

## t $\begin{gathered}\text { a } \\ 35 \\ \text { HEART AND WINDPIPE, } n f r \text {. }\end{gathered}$

Examples of the Archaic Period and Old Kingdom often show a double pair of projections at the top, sometimes slightly separated and sometimes together. The striation of the tracheal cartilage (as in F36) fails to appear even in the most detailed Old Kingdom examples, but was frequently indicated thereafter (Hieroglyphs, pls. [49], 9 [164]). Probably this detail is a secondary reinterpretation (by assimilation to $\sqrt{b}$ F36) of what may originally have been the esophagus (the stomach being $r-i b$, the "mouth of the heart"). It is clear, in any case, that the Old Kingdom scribe regarded the lower element as the heart and not the stomach (contra Vycichl, JEA 39 [1953] pp. 112-113). See also Addenda below.

## I F36 Lungs and Windpipe, zm.

In this case both the shape and the striation of the trachea are apparent from the beginning, in contrast to F35.

## [2/ F39 Backbone and Spinal Cord, im 3 h.

For semi-reversed forms see above, p. 5 (5).

## R <br> F4o Backbone and Spinal Cord, ${ }^{3} w(i)$.

The two ends hang almost symmetrically downward.

## $\$$ <br> G4 LONG-LEGGED BUZZARD, tyw.

The only significant difference between this bird and $\mathrm{G}_{1}$ is the rounded back of the head. The form (Theinhardt font $\mathrm{G}_{5}$ ) was used in the Late Period. In the Old Kingdom the phonetic value was sometimes biconsonantal tw: Edel, Altägyptische Grammatik, §32; Fischer, Coptite Nome, p. 141 .
$\mathrm{G}_{5}$ FALCON, Hrw.

The head is round; the back begins higher than in the case of $\mathrm{G}_{1}$ and $\mathrm{G}_{4}$, and the wing more completely envelopes the body. This sign sometimes replaces $\&\left(\mathrm{G}_{7}\right)$ as the divine determinative in the Old Kingdom and later (Fischer, Dendera, p. 211 , note 820), and again in personal names of the Late Period (de Meulenaere, BiOr 38 [1981], p. 254); note also lin for $h m . i$ in a Dyn. XII inscription, Sethe, Lesestücke, p. 79 (1).

G14 VUlture, $n r(t), m(w) t$.

The very hooked beak, the dip in the neck, and the contour of the back are distinctive. Normally the tail should come down to the baseline, although it was occasionally shortened: Egyptian Studies I, p. 94 and n. 82.

## G2 1 SEnNAR GUINEA FOWL, nh.

Principally distinguished from Gı and $\mathrm{G}_{4}$ by the presence of crests and a wattle. There is a good deal of variation. In earlier examples (Old Kingdom) the crest is more accurately single, and the tail is often shorter; sometimes the wattle becomes $k$, thus:

## G22 HoOpoe, d $b$.

G23 LAPWING, rhyt.
 TwISTED, rhyt.

See Addenda below.

G27 FLAMINGO, dsr.

Earlier examples generally emphasize the large round head and curved beak, and the same is true of those dating to the Eighteenth Dynasty (Hieroglyphs, pl. 6 [79]; Picture Writing, pl. 4 [4]). The sign in Gardiner's font does not show these details satisfactorily, and the beak is too long.

G28 BLACK IbIS, gm(t).

As Keimer remarks (ASAE 30 [1930] p. 23), the Gardiner form is replaced, in the New Kingdom, by one that shows the head bent down, as though "finding" ( $\mathcal{F}$, equivalent to Theinhardt font $\mathrm{G}_{4} 6$ ); but this development does not seem to have begun much before the end of the Eighteenth Dynasty (my example is from Calverley, Temple of King Sethos I, II, pl. 10). A further development of the new form, in the reign of Ramesses III, shows a fish in the bill of the ibis, like the Old Kingdom form of $\mathrm{G}_{5}{ }^{1}$ (Medinet Habu I, pls. 27 [15, 37], 28 [44], $4^{6}$ [15, 21]; Reliefs and Inscriptions at

Karnak I, pl. 42 [E-9]). This replacement seems only to have been sporadic, and did not eliminate the older form. See also Addenda.

## 㦷 G3o Three Jabirus, bsw.

The heads may be lined up by drawing the beaks with a single stroke of the pen. The legs may likewise be simplified by drawing them continuously: $M 1$. Old Kingdom examples of the jabiru show the wattle just beneath the head (so also in the Middle Kingdom: Beni Hasan III, pl. 2 [3]).

## 窢 G32 Heron on Perch, brhi.

## II G33 Egret(?), sds.

G31 HERON, bnw.

G35 Cormorant, ck.

This fishing bird has a long serpentine neck and a very long tail for swimming under water. Note also that the head slopes upward.

G36 SWALLOW, wr.

The wing may be drawn initially, along with the head, so as to guide all the rest. Since scale is frequently ignored, only the wide tail distinguishes this bird from the sparrow
(G37); and the ancient scribe did not always indicate the difference very clearly. Some Old Kingdom examples are relatively large, however; cf. $=$ and $\Delta$ in Saqqara Mastabas I, pl. 1 (center): mn nds, t-wr. In this period the large tail was sometimes allowed to overlap an adjacent border: $M M J 12$ (1977) p. 8, nn. 35, 36 .

## N G97 SPARROW, nds.

## \} ${ }^{2}$ G39 Pintail Duck, zz.

Scarcely distinguished from (G38) except for the slightly different tail, which is only discernible in detailed examples. The neck was sometimes lengthened to goose-like proportions in the New Kingdom.

## \% G40 $^{2}$ Flying DUck, pz.

G41 Alighting DUck, $h n(i)$.

號 G47 Duckling,

The Old Kingdom duckling is decidedly less vertical than Gardiner's $\mathrm{G}_{47}$, and that is equally true of most examples down through the early New Kingdom. My model is Rekh-mi-Rēe, pl. 15 (18, 19). Cf. also Picture Writing, pl. 4 (2), from the same tomb.

To be distinguished from ${ }^{3}\left(\mathrm{G}_{4} 8\right)$, $z \check{s}$, as is pointed out by Montet, Kêmi ${ }_{4}$ [1931]
pp. 174-178.

## G51 Heron on Fish, hism.

## G G54 Trussed goose, snd.

a

b

The Gardiner form is known from the late Old Kingdom (e.g. Deir el Gebrawi I, pl. 3) and onward, but the Old Kingdom form more usually does not show the bird standing on the fish, and, to judge from Old Kingdom examples, the bird was originally a crested heron; since the crest was in line with the bent neck, it soon disappeared.

This form is usual in all periods, but examples from the Old Kingdom show some variations.
$\beta$ H6 Ostrich Feather, šw $(t)$.

Not unlike \& (M17), but normally reversed (cf. Kush 10 [1962] p. 334). The top falls slightly backward under its own weight.

The New Kingdom examples (as in Gardiner's font) represent a gecko; cf. Picture Writing, p. 30 and pl. 5 (1).

I3 Crocodile, mzh.

I6 Crocodile Hide, km.

The Old Kingdom form is more rounded. The Gardiner version became usual in the Middle Kingdom: e.g. Beni Hasan III, pl. 6 (102, 103). But the Old Kingdom form is attested in the reign of Sesostris I: CG 20539 (I b, 11).

## I8 TADPOLE, $h f n(r)$.

## B I13 Erect Cobra.

Kı BuLtr-FISH, in(t).

K2 Barbus Bynni, bwt.

The Old Kingdom version shows the tail curved downward, as in the Mendesian nome emblem, Lower Egypt 16, which represents Schilbe mystus (Ingrid Gamer-Wallert, Fische und Fischkulte, p. 10o); the tail became horizontal in the Middle Kingdom (Montet, Kêmi 3 [1930] p. 72 and pl. 7 [13, 19]).

K3 MULLET, $\stackrel{\text { ® }}{d}(w)$.

The fish characteristically slopes upward.
\& $\mathrm{K}_{4}$ OXYRHYNCHUS, $\underline{h}_{3}(t)$.

As the Greek name indicates, the long snout is distinctive.

## Q $\mathrm{K}_{7}$ BLOWFISH, det. špt.

 of carnivorous fish.

## 忩 L1 DUNG BEETLE, hpr(r).

## L2 BEE, bit.

The thorax and abdomen must be drawn separately. The hind leg, under the abdomen, was often omitted.

位 L7 SCORPION, Srkt.

The stylization of this sign, omitting the tail and its venomous sting, is one of those modifications that derives from funerary texts in the burial chamber: Lacau, $Z \ddot{A} S_{5}{ }^{1}$ (1913) pp. 49, 57. See Addenda.

M2 RUSH, ḥn(i).

c

This form is found in all periods, but Old Kingdom examples show a great deal of variety.

> M3 Piece of Wood, ht.

New Kingdom examples resemble a branch, and the sign is usually described thus, but earlier examples depict a trunk with all branches lopped except for the one at the very end.

## ع Mıı LOTUS ON A LONG STALK, wdn.

The Old Kingdom forms vary considerably, sometimes showing the open flower, sometimes a bud; in one case the flower is replaced by the head of a goose (Egyptian Studies II, p. 129, note 423). A certain amount of variation is also found in examples of the Middle Kingdom.

a

b

C

d (M.к.)

f M12 Leaf, Stem, And Rhizome, of Lotus, $h_{3}$.

a

b

c

Archaic examples again show variation: in some the leaf is upright, in others it is turned forward, as though floating on the water, and in either case the signs may be joined at the base to form a plurality of thousands. Gardiner's form, with the leaf turned forward, was usual from the Old Kingdom onward, but the upright leaf reappeared sporadically (Figure c) and especially in numbers. Clusters of two or more signs are also known from the Old Kingdom (Figure b), although more rarely. See also Addenda.

## $8 \mathrm{M}_{13}$ Papyrus Stalk, wisd.

Archaic examples show projecting leaves at the base of the stalk, as do some dating to the Old Kingdom (illustrated here) and even later.

M15 PAPYRUS THICKET, ${ }_{3} h, m h(w)$.

The base represents the water in which the papyrus is growing. Quite often, from the Old Kingdom onwards, the form is simplified to $\mathbb{q}$ (M16), which otherwise has the value $h_{3}$.

## $\downarrow$ M22 Rush with Shoots, $\downarrow \downarrow$ nn.

In earlier examples (Old Kingdom and Middle Kingdom) the top of the plant is distinctly shorter than it is in $\ddagger(\mathrm{M} 23)$, and that is sometimes true of examples dating to the early New Kingdom; compare, for example, Menkheperrasonb, pls. 10 (M22, M23) and 14 (M23), whereas forms like those used by Gardiner appear in Tylor and Griffith, Paheri, pl. 1; Petrie and Quibell, Naqada and Ballas, pl. 77, and often elsewhere. The group $\downarrow \downarrow$ is regularly replaced by $\not \approx \neq$ in inscriptions of the Heracleopolitan Period (nomes U.K. 4, 5, 6), and the occasional assimilation of $\downarrow$ to $\not \approx$ is also known from later periods. See also Addenda (M12).

## $\not \ddagger$ M23 Sedgelike Plant, sw.

In this sign, as in the next, the earliest Old Kingdom examples (a) show the leaves overlapped alternately. Fifth Dynasty forms (b) begin to depart from this arrangement; later (c) the leaves are often joined symmetrically. For details see Fischer, Dendera, p. 17, and JNES 18 (1959) pp. 269-271.
7. M26 Flowering Sedge (?), šmヶ(w).

In the New Kingdom the flowering end of this sign was stylized so that it resembles a fleur de lis, and examples such as the one in Figure b (emblematically representing Upper Egypt) are sometimes mistakenly identified as a lily or lotus.
( M29 SEED POD, ndm.
\& Mgo Sweet-tasting Root (? ), bnr
 OF LOTUS, $r d$.

The forms are variable. In the Old Kingdom this sign resembles a leg; the sign $』\left(\mathrm{D}_{5} 6\right)$ is, in fact, likewise read $r d$, but these two signs were consistently differentiated.
\& M4o Bundle of Reeds, iz.

a

b

Old Kingdom examples show a considerable amount of variation (see also ZÄS 93 [1966] p. 58, fig. 3). This sign c must be carefully distinguished from $\ell, \ell$ (Aa28, 29).

## $\int$ Ni 8 Bolt of Cloth, dizw.

As a sign for cloth (listed after Gardiner's S26), this represents rolled up linen, and not "a garment" (MMJ 1o [1975] pp. 14-20). See also Addenda.

ㅍN 23 Irrigation Canal.

In my Dendera, p. 90 (15), I note that the Old Kingdom determinatives $\square,-$ (N2O-22, Aa12) became $=(\mathrm{N} 36)$ in Dyn. VIII, and $\mp$ late in Dyn. XI. But hieratic $\boldsymbol{x}$ occurred in the Old Kingdom, Berlin Pap. 8869 (Smither, JEA 28 [1942] p. 17, line 11), and hieroglyphic 프 in Meir V, pl. 26 (and cf. pl. 22); also LD Text, II, p. 60.
$\leadsto, \leadsto \mathrm{N} 25, \mathrm{~N} 26$ Mountains, $h_{3 s t}, \underline{d} w$. In Archaic examples the sides are sloping rather than vertical, and this feature persists to some extent in the Old Kingdom (b), and somewhat later.

## - N28 SUn RISING BEHIND HILL, hri.

As may be seen from the detailed Old Kingdom example, the outer curve defines the rays of the sun.

N31 ROAD Bordered by Shrubs, wst.

In the earlier Old Kingdom inscriptions this sign, as well as $=\left(\mathrm{N}_{3} 6\right)$, is apt to be curved (Petrie, Medum, pls. 9, 12). Thereafter it was usually straight, but the curved forms appeared occasionally, and even in much later periods. The curved example shown here is Dyn. V.
f $\mathrm{O}_{2} 8$ STONE COLUMN, izn.
a

b

In Old Kingdom examples the column is sometimes fluted. The notched top began to appear in the Sixth Dynasty (Fischer, Dendera, p. 84). See also Addenda.

## \& O29 Wooden Column, $ヶ$.

b (м.к.)

## IIII IUI UIII +1世t

For variations of the second sign, used in the Old Kingdom, see JARCE 2 (1963) pp. 25-26. New Kingdom examples of ${ }^{-24}$ are frequently reversed, either wholly or in part, and even in inscriptions that show the normal rightward orientation: Rekh-mi-Rér, pls. 68, 92, 94; Caminos, Buhen I, pl. 62 (12); Brunner, Die südlichen Räume, pls. 63, 75. An early variant (Old-Middle Kingdom) shows the sign in an extended hand: $\quad$.

## Y

O44 Emblem of Min Temple, ist.

Used in all periods, but Old Kingdom examples show some striking variations.

c

d

## - O49 CROSSROADS, nizt.

The second form is occasionally found in Old and Middle Kingdom inscriptions, and more frequently in those of the Heracleopolitan Period and Eleventh Dynasty: cf. Fischer, Dendera, pp. 78-79.

P1 BOAT, dpt, ȟw.

With seat and steering oar. Old Kingdom examples usually omit the oar (Figure a), and a boat with high prow and stern (Figure b) is preferred in titles of that period.

P2 SHIP UNDER SAIL, det. haiti.

The ship should be moving forward. Gardiner's reversed form applies only to a few very special cases (Egyptian Studies II, §4o).

## !

P3 SACRED BARK, wiz.

The forms vary. This one shows a high prow and stern, like the ships in Old Kingdom titles, and it carries a shrine containing the god's image. See Addenda.

## $\Leftrightarrow \mathrm{P}_{4}$ FISHERMAN'S BOAT, whir.

The Old Kingdom form usually has a high prow and stern (as also in the Middle Kingdom: Beni Masan III, pl. 3 [23]), and the example illustrated here (a) also shows the pattern of the fisherman's net. The second Old Kingdom example (b) is a less common variant. Another example, from the Middle Kingdom (c), shows a catfish (whir) in place of the net.

a

b

c (M.K.)

The Gardiner and Theinhardt fonts wrongly reverse the direction of the sail, which should move forward rather than backward (Egyptian Studies II, §39). Old Kingdom examples show no orientation in either direction, as illustrated here.

䍗 P6 MAST，che．

Old Kingdom examples have a shorter stem at the base．

丹 R8 Pennant，Emblematic of Divinity，ntr．

The top of the pennant is slanted；the bottom，in the Old Kingdom，was usu－ ally horizontal，but sometimes also slanted as in Gardiner＇s version．The pen－ nant consists of strips of cloth，wound around the pole．In the Archaic Period it took the form：7，which reappeared occasionally in the Old Kingdom （Fakhry，Monuments of Sneferu at Dahshur II，fig．9o；cf．Caminos and Fischer， Epigraphy and Palaeography，p． $4^{8}$ and note 76）．
m R1O Combination of R8，T28，N29，hart－ntr．

The Old Kingdom examples show many variations；see MMJ 12 （1977）p．9，fig． 3 （a－ i），and so too，to a lesser extent，the forms of later periods．

## 看 R11 DD－COLUMN．

Normally the top is quadruple，rarely triple（for the latter see Ancient Egypt in the Metro－ politan Museum Journal［New York，1977］p． 160 and note 13）．

4 $\mathrm{R}_{1}$ Feather on Standard，isb．See Addenda，below．

## 

The emblem of Upper Egyptian Nome 8 shows a good deal of variation; some Old Kingdom forms are displayed in JAOS 74 (1954) p. 34, and some later writings in $W_{Z K M}^{57}$ (1961) pp. 72-77.

』. Si White Crown of Upper Egypt, hdt.

## s/ S3 Red Crown of Lower Egypt, $n(t)$.

## 01

S23 Flagella and $\check{S} N$-Sign, $d m d$.

Originally represented a neckband from which an amulet was suspended, as shown in the Old Kingdom example; for the amulet see Margaret Murray, Ancient Egypt (London 1917) pp. $5^{-}-53$. The New Kingdom version misinterprets the old sign as a pair of flagella ( $\wedge \mathrm{S}_{45}$ ) and the $\check{s} n$-sign ( $(\mathrm{Q} 9)$.

a

b (N.K.)

Originally resembled an elaborate bow, in which the lower part represents the two ends; in Archaic examples these two ends are sometimes widely separated: $\neq$. For the difference between this sign and $\left(V_{39}\right)$ see $M M J_{5}$ (1972) Pp. ${ }^{11-15}$. It does not seem possible to explain it as a sandal strap; cf. Jéquier, BIFAO 11 (1914) pp. 132-133.

## $\uparrow$ S4o W3S-SCEPTER.

This seems originally to have been a herdsman's staff: see Fischer, "Some Notes on Sticks and Staves," §9.

』 S43 Walking-STICK, mdw.

The orientation, with knobbed end downward, reflects the way the stick is carried in early representations down through the first two reigns of Dyn. IV: Egyptian Studies II, $\$ 45$.

## १, of $\mathrm{T}_{3}, \mathrm{~T}_{4}$ Pyriform Mace, hd.

a

b

The second form is known from the Archaic Period and was used fairly frequently in the Old Kingdom and later. In most of the earlier cases the loop is near the top, as in Figure b, so that this can hardly be "a strap to pass round hand."

## Si T12 Bowstring, rwd.

See Addenda.
1 T13 SHELTER(?), rs.

a

b

C

The Old Kingdom form often shows a base. The New Kingdom form is similar to that of the $p d-$ - $h r$ implement, as attested in Pyr. 1245 (c, M), but it seems doubtful that the latter originally had any connection with the sign for $r s$, cf. Jéquier, Frises d'objets, p. 226. The looped tie may have been suggested by that of ( $\mathrm{M}_{3} 6$ ), which began to replace the simpler form 僄 (M7) in Dyn. XII: Petrie et al., Lahun II, pl. 29; Meir II, pls. 3, 4 .

## \% T17 CHARIOT, wrrt.

This shows the earlier New Kingdom type of chariot, with the wheel located beneath the center of gravity rather than (as in the Amarna Period and after) behind it. My model is Picture Writing, pl. 9 (6), also shown in Ken-Amūn, pl. 13.

## T21 HARPOON, wr.

My own drawing is closer to the earlier examples. The Theinhardt form U37, with two barbs ( $\omega$ ), began to be used in Dyn. XVIII, and at least as early as the reign of Tuthmosis III.

## A T25 Reed Float, dbs.

a

b

c (м.K.)

d (N.K.)

Fig. $d$ is an unusual example. The tie is normally in front, but there are many exceptions. See also Addenda.

』\# $\boldsymbol{\|}$ T26, T27 BIRD-TRAP, sht.

The Old Kingdom sometimes used the schematic form T27, which evidently shows the two overlapping halves of the trap, but often a more realistic representation was preferred (b). Figures c and d show the net opened and closed. For details see Vandier, Manuel d'archéologie V, pp. 307-313; also Addenda.

a

## 凹 T28 Chopping Block, $\underline{\text { h } r}$.

## 4

Some Old Kingdom variations are discussed in Orientalia 29 (196o) pp. 172-174. In the second half of Dyn. XVIII the bottom of this sign became rounded, evidently by assimilation to $\mathrm{E}_{11}$ ) or to the sun-disk in $\mathrm{K}_{\mathrm{R}}\left(\mathrm{N}_{7}\right)$ : Ken-Amūn, pl. 13; Ramose, pls. 11, 25 39, 4o. For the same feature in 冒 see Ramose, pls. 8, 11, 39; Private Tombs I, Pl. 59. The latter (pl. $5^{2}$ ) also shows $\mathbb{\&}$, which subsequently became quite common (MMJ 12 [1978] p. 16, and note 142). See also Addenda, below.
3 U1 Sickle, mz.

The Old Kingdom hieroglyph shows the flint blades along the cutting edge. For an actual example see Petrie, Kahun, Gurob and Hawara, pl. 9 (22).

U6 Hoe, m:

a

b

May show either one or two crosspieces, as explained by the single or double rope in Old Kingdom hieroglyphs. For an actual example see Petrie, Tools and Weapons, pl. 68 (62).

U13 PLOUGH, hb, sk3.

Here the blade is directed forward rather than backward, as in the case of the hoe (U6).

## - Uqo Adze (Old Kingdom), nw.

Gardiner's "somewhat similar sign," used in the Old Kingdom as determinative of ent "nail," often shows the form illustrated here.
$\sim \mathrm{U} 21$ Adze, stp.

A detail from an Old Kingdom scene shows the tool in action, the ancestor of the plane. Note how the metal blade is fastened to the handle. Actual examples may be seen in Petrie and Brunton, Sedment I, pl. 21 (5-6).
$\uparrow$ U2 2 Chisel, mnh.

Used with a mallet, as shown in the detail from an Old Kingdom scene (Figure b). The Old Kingdom hieroglyph is taller than the New Kingdom version of Gardiner's font.

## © U25 (О.К.), U24 (м.к.)

STONEWORKER's DRILL, hmt.

As Gardiner notes, the same sign is used for 3 b. Old Kingdom examples normally show a projection at the front of the handle, and this was evidently provided to keep the thumb from slipping, as demonstrated by Figure c . The same feature is sometimes found in Middle Kingdom examples: Hieroglyphs, pl. 8 (107). In the Eighteenth Dynasty a slightly different form, with a narrow cap at the top (Figure d), became common from the reign of Tuthmosis III onward. An early example of this period (e) shows a wider cap.

Weighted at the top with stones; a piece of flint or sandstone inserted in the fork at the bottom does the drilling (cf. Firth and Quibell, Step Pyramid II, pl. 93 [4]; Borchardt, Grabdenkmal Ne-user-ree, fig. 124). The drawing in Figure c shows how the drill was operated, and also explains the jog in the stem (Figure b), which occurs in many examples including those of the New Kingdom (e.g. Picture Writing, pl. 8 [10]). Gardiner's U25 and 24 wrongly show the top slanting backward instead of forward; cf. Rekh-mi-Rēr, pl. 36; Ken-Amūn, pl. 13, and the orientation of this detail in Figure c. The second of the Old Kingdom examples has already begun to resemble Gardiner's New Kingdom form.

! U27 (O.K.), $\ddagger$ U26 (N.K.), DRILL FOR
Small Objects, wbs.

The figure shows a craftsman drilling a hole in a bead; Gardiner's U27 is probably taken from the caption of this scene.
d U28 (N.K.), 』 U29 (O.K.) FIRE-DRILL, d3.

A variant often used in the late Old Kingdom, illustrated here, shows the drill penetrating the wood. For an actual example see Brunton and Engelbach, Gurob, pl. $4^{6(19)}$.
© Ugo Potter's Kiln, ts.

a

b

Old Kingdom examples often distinguish the brick walls of the kiln from the opening at the bottom and from vertical lines at the top, representing glowing heat. Occasionally the top is a rounded heap of glowing coals, as seen in the Old Kingdom example illustrated here (Figure b), as well as at least two examples from the New Kingdom. See Addenda.

The Old Kingdom scene illustrated here (a) shows coarse fiber, probably papyrus, being twisted to make rope. In preparing flax thread for cloth (b) the spinner stood, and let the spindle twirl freely in the air to twist the loosely gathered rove.

b (м.к.)

! U36 FULLER's Club, hm.

The earlier examples (Old and Middle Kingdom) are usually broader at the base, and are narrower above this point. Thus the recommended simplification is less inaccurate than it might appear.
$\leftarrow$ V2 Bolt and String, stz.

Figure b illustrates an additional New Kingdom example showing the protuberances of the bolt. The Old Kingdom form (a) evidently does not represent a bolt at all, but perhaps a yoke for oxen (Graefe, MDAIK 27 [1971] pp. 149-150). See also Addenda.

## fl $\mathrm{V}_{4}$ LASSO, w.

Easily drawn with a single line. The knot of the lasso is rarely indicated.

If this sign represents the papyrus bandoleer worn by boatmen (Figure d), as is assumed by the authorities whom Gardiner cites, then it most probably is a life preserver, as proposed by Oric Bates in Harvard African Studies I (1917) pp. 231-232. It should be noted, however, that the bandoleer is evidently termed $\Delta 4$ 畾 kni (Firth and Gunn, Teti Pyramid Cemeteries, pl. 5 2; Pyr. 2044a) and that V18, unlike the determinative of this word, is not divided at the bottom (a, b). But the determinative of $k n i$ is virtually reduplicated by the Middle Kingdom example of $z_{3}$ shown in Figure c, Kingdom example of $z 3$ shown in Figure c,
and from this period onward the bottom of the $z z$ sign was usually divided.

## $8 \mathrm{~V}_{1} 8, \mathrm{R}^{\mathrm{R}} \mathrm{V}_{7}$ LIFe Preserver, zz.

q V23 (O.K.), ${ }^{\infty}$ V22 (N.K.) WHIP, mh. ( $111 M P 2$

An Old Kingdom example clearly shows the structure.

## $\oint \quad \operatorname{V24}$（O．K．），$\hat{Y}^{\gamma} \quad \operatorname{V25}$（later）

Cord Wound On Stick，wd．

a

The cord is sometimes moved higher on the stick，in which case it may easily be confused with $\left\{\left(\mathrm{T}_{3}\right)\right.$ ．It is doubtless for this reason that the later form ${ }^{\gamma}$ was devised；it first came into use toward the end of Dyn．XII（JEA 61［1975］p．246，note 6）．One of the ear－ lier examples of V25（Figure b）still shows the cord at the center， however．
b（м．к．）
$\& \quad V 29 \mathrm{SWAB}, \operatorname{sk}(i), w_{3} h$.

The Old Kingdom forms show a certain amount of variation．Figure c，resembling Gar－ diner＇s V29，soon became the most common of these，but it sometimes has three loops or（rarely）a single loop，instead of two．The three－looped form also occurred fairly fre－ quently in the New Kingdom．

a

b

c

d

e

## 产，首 W2，W1 Sealed Oil Jar，bss，miht．

As in the case of - and $-\left(\mathrm{Y}_{2}, \mathrm{Y}_{1}\right)$ ，the later form shows the ends of string beneath the seal．But Old Kingdom examples often omit the seal altogether，and they may also show the vein－ ing that is characteristic of alabaster，for which see also $G M 122$（1991）pp．23－24． Although $\eta$ sometimes continued to appear in the name of Bastet after the Old King－ dom，this usage was by no means as regular as Gardiner indicates．One example，dat－ ing to the early Middle Kingdom，has $\rrbracket$（Petrie，Koptos，pl．10），while another of the same reign has 首（Lacau and Chévrier，Une Chapelle，pl．42），and the name of the
goddess usually shows 首 in early New Kingdom writings (e.g. MMJ 9 [1974] p. 31; Moh. Aly et al., Temple d'Amada IV, C24; Habachi, Tell Basta, fig. 26 and pl. 4o; so also the example cited by Gardiner: Northampton, Spiegelberg, Newberry, Theban Necropolis, pl. 34 [2]); the same is true of the later New Kingdom.

W3 Alabaster Bowl, hb.

The lozenge at the center is a simplification of the variegated layers of the stone, which were exploited as decoration. This veining also appears in W2, above, and in Aa31, below.

## Wi7, W18 (O.K.)

 $H Z-\mathrm{VASES}$ IN A RACK, $h n t(i)$.

Begin with the caps of the vases. The form with four jars is more usual in the earlier Old Kingdom inscriptions, but examples with three jars were not uncommon in that period (Junker, Gîza IX, p. 149, note 1) as also in the first dynasties. In a very few cases the row of four jars is reduplicated, the tops of the second row rising behind the first. The simplified version of this sign was occasionally used from the Old Kingdom onward (e.g. ibid., fig. 44), but usually assumed a form like 洏 (Clarence Fisher, Minor Cemetery at Giza, pl. 49 [3]; Petrie, Gizeh and Rifeh, pl. ${ }^{7} \mathrm{D}$ ); in the early New Kingdom simplified forms such as $\mathrm{T}_{\mathrm{m}}$ became quite common.

O W24 POT, nw.

In Old Kingdom examples the rim is rounded, not everted, and so too in the Middle Kingdom (Hieroglyphs, pl. 8 [141]), as distinguished from Gardiner's New Kingdom form.

## 

The first dated occurrence of the later form, showing the ends of the strings projecting from beneath the mud seal, belongs to the first reign of Dyn. XII. The variant showing a single string is most commonly attested from early Dyn. XII, the reigns of Sesostris I to Amenemhet II (Wolfgang Schenkel, Frühmittelägyptische Studien, §2), but occurred sporadically down through the Second Intermediate Period (RdE 24 [1972] p. 70, note 1).

## Aa5 HPT-IMPLEMENT.

The Old Kingdom form is slightly different, and is differently oriented. It appears in the earlier writing of the prenomen of $\mathrm{Nb}-h \mathrm{ht}-\mathrm{Re}^{c}$ Mentuhotep (Naville, XIth Dynasty Temple at Deir el-Bahari I, pls. 12 [E], 17 [E]), but was replaced by the later form in the Twelfth Dynasty: Blackman, Meir I, pl. 11 (= II, pl. 17 [66]); Hayes, Se’n-Wos-ret-ankh, pl. 7 (391, 393).

a

b

The second, later form is generally agreed to represent the cover of a quiver. It is known from the beginning of Dyn. XII onward: Hayes, Se'n-Wosret-「ankh, pls. 5 (306), 7 (384, 386), etc.; Newberry and Griffith, Bersheh I, pl. 18. The two Old Kingdom variations both occur repeatedly and both favor the interpretation as a "lid" (Iversen, JEA 42 [1956] pp. 54-57) rather than a "quiver" (Goedicke, JEA 45 [1959] pp. 99-1oo; the quiver he compares, in an unpublished relief from the Userkaf pyramid temple, is suspended from a sling tied at each end, and shows other differences). Often replaced by hieratic 1 in early Middle Kingdom inscriptions (ZÄS 100 [1973] p. 19 [H]).

The first of the Old Kingdom forms shown here is anomalous, but it suggest that in that period this sign was understood as a kind of sack. An unusual Middle Kingdom variant (d) resembles a tunic. See also Addenda.

## Aaa 7 SIGN FOR ND.

If the lower part of this sign is effaced, this may be (and sometimes has been) mistaken for ${ }_{a}^{\dagger}$ (F35).

1 Aa29, $\sqrt{2}$ Aa28, Brickmaker's Striker, wd.
 A variety of forms occur in Old Kingdom inscriptions. In general this sign is thinner than \& $\left(\mathrm{M}_{4} \mathrm{O}\right)$, which it tends to resemble, and in Old Kingdom examples the protuberance is usually near the upper or lower end. For the nature of the implement, see Hieroglyphs, p. 49, and Badawy, JNES ${ }_{15}$ (1956) pp. 177-179; for further Old Kingdom examples see ZÄS 93 (1966) p. 58, fig. 3 (aa-jj).
a
b
C
Alg Jar, \& Aago Cheval de Frise, her.

The Old Kingdom form represents an inverted alabaster jar, as Griffith has already noted in Ptahhetep I, p. 37.

## Addenda

A9－The form of the basket is somewhat variable in the earlier Old Kingdom examples；it may be very shallow，as in Fig．a（from Junker，Gîza I，pl． 23 ［early Dyn．IV，reversed］；cf．LD II， pl．64a［late Dyn．V］），and may，in addition，bear a single pellet （Junker，Gîza II，figs．11， 33 ［both early Dyn．V］）．In one case，dating to the beginning of Dyn．IV（Fig．b，reversed），the basket is deeper but shows a series of pellets：Louvre B1，cf．Christiane Ziegler，Cata－ logue des stèles．．．de l＇Ancien Empire（Paris 1990）p．99．In another case it is quite deep and has a single pellet；Cairo CG 1790 （seen from the original）．

A25－This was used occasionally as the equivalent of 界（A47）in the Middle Kingdom， and more often（along with ${ }^{\circ}$［A24］）throughout the New Kingdom；see Egyptian Studies III， pp．177－179．
 the end of the Eighteenth Dynasty（temp．Ay），although an example is known as early as the Twelfth Dynasty：see Egyptian Studies III，loc．cit．

19 A48－A clear Old Kingdom example of this variant of ${ }^{2 / 8}$ is shown in Ptahhetep I，pl． 4 （10）．For the context see R．F．E．Paget and A．A．Pirie，Tomb of Ptah－hetep（London，1898） pl． 31 （top），where a $\ddagger$ h hrp－mniw supervises herdsmen．Conversely 淠 could be used as the determinative of iry in the New Kingdom（Ramose，pl．42）．

旬 $\mathrm{B}_{1}$ —Although the group 通通 is normally of equal height，Old Kingdom inscriptions fre－ quently show the woman slightly smaller than the man：e．g．Junker Ĝ̂za III，fig． 16 （but not fig．27）；Hassan，Gîza II，fig．2o6，III，figs．104， 15 ；V，fig．101；Borchardt，Grabdenkmal Śashu－ré II，pl． 20 （but not pl．19）；Bissing，Re－Heiligtum III，pl．11；Tomb of Mten（MDAIK 21 ［1966］，pls．3，5，6）；Egyptian Studies I，fig．14，p．47；James and Apted，Khentika，pls．5－6 （ $\mathrm{B}_{1} 6$ ，but not $\mathrm{B}_{13}$ ； $\mathrm{D}_{3}$ ，D6，but not $\mathrm{D}_{10}$ ）．
$\diamond \mathrm{D}$（not in Gardiner font）－Herman de Meulenaere（BIFAO 81 supplément［1981］，pp．87－ 89 ）confirms that the reading of this term for＂repast＂is to be distinguished from $i r w-r$＂breakfast＂ and read cb－r or（to my mind less probably）simply $c b$ ．Cf．Pyr．6oa（and $110 e-f$ ），in which it is introduced by a paronomastic statement：irb n．k sir r．k＂unite it（the $w d s t$－eye）to thy mouth．＂

- D2-A deformation of this sign evidently explains the sign @ as a writing of $\vee$ hry-tp "overlord" at Beni Hasan in Dyn. XII: Egyptian Studies III, pp. 190-191.
$\leadsto \mathrm{D}_{4} 1$-For the Old Kingdom form $\leadsto$ as the dual of $\sim\left(\mathrm{D}_{3} 6\right)$ see Egyptian Studies III, pp. 180-186.

D 45 -Possibly the New Kingdom reinterpretation goes back to an Old Kingdom example such as the one shown here, from Dunham and Simpson, Mersyankh III, fig. 6 (reversed). In this particular case, however, the object is not green but white, with red detail (Smith, History of Egyptian Sculpture and Painting in the Old Kingdom, p. 375).

$\wedge \mathrm{D}_{54}$-The form $\mathcal{A}$ (with kilt) is also to be seen in Old Kingdom hieratic: Paule PosenerKriéger and Jean-Louis de Cenival, Hieratic Papyri in the British Museum, Fifth Series, The Abu Sir Papyri (London, 1968) Pal. pl. 3. This detail probably explains the flat top of some early Middle Kingdom forms such as $\lrcorner$ (Davies, Antefoker, pl. 8; K. Dyroff and B. Pörtner, Aegyptische Grabsteine II: München [Strassburg 1904], pl. 1 [1]) and \& (Metropolitan Museum of Art Neg. M7C 133), which shows the bottom edge of the kilt.

D6o-It is generally assumed, and rightly so, that this composite sign goes back to the Pyramid Texts of the Old Kingdom, but note that (1) there the two signs are not united; (2) they appear together in the writing of $w b$ as show variations such as $\downarrow$ and composite $\mathrm{F}_{17}$ ). All three variations occur, for example, in Pyr. 127 a, b. The use of 18 in inscriptions aboveground is first attested on Eleventh Dynasty stelae: e.g. J. J. Clère and J. Vandier, Textes de la Première Période Intermédiaire et de la XIème Dynastie (Brussels, 1948) §§14, 20 (B), 22, 23; in these cases the two elements are still slightly separated, but soon they were more often fused: ibid., $\S \S 27$ (t), 32 (14), 33 (4). The separation often persisted in Dyn. XII: Meir III, pls. 14, 24; Newberry and Griffith, Bersheh I, pls. 13, 15; Petrie, Antaeopolis (London, 1930) pls. 4, 24; but also joined, pls. 26, 27.

E8-Contrary to Gardiner, JEA 17 (1931) p. 246, this form was, on occasion, replaced by (E8*) as early as the mid-Eighteenth Dynasty: Rekh-mi-Rer, pl. 86 (right, col. 9). And in Dyn. XIX might also be assimilated to the lively movement of the latter (Clère, RdE 11 [1957], p. 26).

霖 E31—Lahun II, pl. 30 (58), cited in the first edition, errs in omitting the seal, as may be seen from the original inscription, now in the Oriental Institute, Chicago; see JEA 68 (1982) p. $4^{6}$. The Beni Hasan reference, added in the second edition, is corroborated by LD II, pl. 130. For the hornless kid see also Mereruka II, pl. 21 3; this also recurs, as an archaism, in Dyn. XVIII: Helen Jacquet-Gordon, Karnak-Nord VI, Le Trésor de Thoutmosis Ier: La Décoration (Cairo, 1988) p. 237 and pls. 46 (A), 48.

1 F12—Occasionally assumed the form in the Middle Kingdom: Egyptian Studies III, pp. 187-190.
$-T^{*}$ F29—For other variants, including $\Vdash^{\curvearrowleft}$, see Egyptian Studies III, pp. 192-194
§ F35-Fairman (ZÄS 91 [1964] p. 8), cites Ptolemaic examples of $\ddagger \circ \circ$ meaning "throat," "gullet;" this favors the interpretation of the sign as the esophagus, and provides the origin of the phonetic value $n f r$.
. G7-Although Kaplony gives abundant evidence for this sign as a logogram for ntr "god" in the Archaic Period (Chronique d'Egypte $4^{1}$ [1966] p. 9o], this usage is more common in Old Kingdom inscriptions than he indicates: a striking example appears in the phrase $n b i \mathrm{~m}_{3} h$ hr ntr.f "possessor of reverence with his god" in Hassan, Gîza III, fig. 104:

For other evidence see Abdel-Moneim Abu Bakr, Excavations at Giza 1949-1950 (Cairo, 1953), fig. 47, in dws ntr "praise god" (thank); also $M M J 11$ (1976) p. 73, fig. 13 and 74, n. 72, where Old Kingdom examples are cited of the title the secret of the god's words (scil. hieroglyphs)" and $\underset{\sim}{\text { art-ntr }}$ "necropolis," for which see also MMJ 12 (1977) p. 9, fig. 3 a-c. The writing of the title occasionally took the same form in the Middle Kingdom: Beni Hasan I, pl. 17; Montet, Kêmi 3 (1930) p. 74 (Siut I, 334).

G2o-Although this composite form did not become usual until Dyn. XVIII, an example occurs on a stela that may well be as early as Dyn. XIII, and in any case is earlier than the New Kingdom (Hieroglyphic Texts from Egyptian Stelae E $\mathcal{E}$. in the British Museum III [1912], pl. 6 [BM 334]; cf. comments on $\mathrm{R}_{15}$ below). An even earlier example is given in Urk. VII, p. 12
(17), but this is less complete in the publication from which it is taken (Beni Hasan I, pl. 44, line 8 ) and the surrounding area is evidently damaged; the horizontal line, interpreted as an arm, is probably accidental.

8 G26-In examples of the Old Kingdom and later the perch shows distinctive peculiarities. These details are discussed in Egyptian Studies III, pp. 201-205, as well as the origin of the writing $\theta\left(\mathrm{X}_{2}\right)$, in place of the entire sign, which is known from the end of the Heracleopolitan Period.
$\mathcal{P}_{8}$ G28-The bill seems occasionally to have been elongated downwards to ground-level in some earlier examples, one as early as Dyn. XII (Amenemhet II: Balcz and Bittel, MDAIK 3 [1932], fig. 13, facing p. 28), another dated to the beginning of Dyn. XVIII (Tuthmosis I: J. de Morgan et al., Catalogue des monuments I [Vienna 1894], p. 85 [13]).

伦 L7-The abbreviated form appears aboveground in at least one Old Kingdom chapel: Hassan, Gîza II, figs. 17, 22, 25, 27. The much more complete Old Kingdom examples shown here are (a) traced from the Hildesheim chapel of Whm-k3 (cf. Hans Kayser, Die Mastaba des Uhemka [Hannover, 1964] pp. 37, 7o) and (b) after Drioton, ASAE 43 (1943) p. 500, fig. 67 (both reversed). As Jean-Philippe Lauer has reminded me, this form is also to be found in the reliefs of Djoser (e.g. Firth and Quibell, Step Pyramid, pl. 41). Later the legs were placed on both sides of the body: e.g. Beni Hasan I, pl. 7. But the form shown in Fig. a reappears in Adriaan de Buck, Egyptian Coffin Texts V (1954) p. $14^{2}$.

a

b
$\ddagger, V_{12}$, M22-These two signs were very occasionally assimilated in the Old and Middle Kingdom, as is shown in Egyptian Studies III, pp. 205-208.

- N18-This sign was often used as a generic determinative in the Old Kingdom. As demonstrated in the article that is cited, a three-dimensional version of it was placed in the
fisted hands of statues from the Fourth Dynasty onward (see also Ancient Egypt in the Metropolitan Museum Journal, [1977], p. 184). In my opinion, Albrecht Fehlig, in attempting to explain this in terms of religion and ritual (SAK 13 [1986], 55-94), has unnecessarily complicated a simple matter.
- N20—For variations of this sign and $\square$ (N22) see MDAIK 47 (1991) 132-133.

ص37-Contrary to Gardiner's observations, the replacement of this sign by $ص$ (N38) became common only in Dyn. XI and later. In the Old Kingdom N38 is normally used for grgt "settlement," stit "aroura," and rarely spst "nome" (loc. cit.).
$\sqrt{7}$ O22-The word $h b$ "festival" was originally written with this sign, and evidently down through the reign of Djoser; thus, prior to the Fourth Dynasty, only the context distinguished it from $z h$ "pavillion;" this usage survived to some extent as late as the Middle Kingdom. See Egyptian Studies III, pp. 208-209.

O28-Jean-Philippe Lauer has called my attention to the fact that such columns, in the Djoser pyramid enclosure, were painted red, apparently in imitation of wood. This observation also agrees with the color data for O28 given by Wm. S. Smith in History of Egyptian Sculpture and Painting, pp. 367, 379.
ex, ele $\mathrm{P}_{1}, \mathrm{P}_{3}$ —The Old Kingdom ship with high prow and stern, used in titles, cannot be proven to have the value $h \subset w$, but it is evidently a masc. word, and $h^{〔} \tau w$ does have such a determinative in a Middle Kingdom inscription (Abdel Moneim Sayed, RdE 29 [1977], pl. 16 (b) lines 3, 7). One Old Kingdom title precedes the determinative by phonetic kz (Junker, Gîza V, figs. 5 a, 29 a ), but this term is not known elsewhere, and, equally exceptionally, it is written in the plural. As in the Middle Kingdom inscription just mentioned, the context of the Old Kingdom titles in question refers, for the most part, to commercial expeditions (mining and trade); cf. Fakhry, ASAE 38 (1938) pp. $4^{0}-4$ 1; Fischer, Coptite Nome, p. 33. The ship with high prow and stern also, very occasionally, appears as the determinative of words such as $s d_{3}$ "travel" (Urk. I, p. 182 [3]), skdwt "sailing" (ibid., p. 183 (9), hnti "sail upstream" (ibid., p. 214 [13]). Similar hieroglyphs were also, of course, applied to sacred barks in the Old Kingdom, and hence are the equivalent of New Kingdom ( $\mathrm{P}_{3}$ ); one such example serves as the determinative of $d p t-n t r$ "divine boat" (Hassan, Gîza I, fig. 13). For these and other hieroglyphic forms of sacred barks see Anthes, ZÄS 82 (1958) pp. 82-83; Fischer, Dendera, pp. 124-125; also ZÄS 86 (1961) p. 24, where the form resembles $\Leftrightarrow\left(\mathrm{P}_{4}\right.$, whr). Conversely,
the high-prowed form of $\mathrm{P}_{3}$ is employed for whr in Edel and Wenig, Jahreszeitenreliefs, pls. A and 12 (as opposed to pl. 18).
$\curvearrowright \mathrm{R}_{5}-\mathrm{H}$. Brunner's study of this sign and its successors (Nachrichten Göttingen 1965, No. 3, pp. 79-96) should be noted, although he mistakenly interprets the curved projection as a handle in those Old Kingdom examples where the sign is reversed, rather than a stream of smoke (p. 83) —an error that Gardiner avoids. For the reversal of Old Kingdom $\mathbb{A}_{\triangle}$ (R6) both rightward and leftward (Ti III, pl. 172) cf. Egyptian Studies II, §38 and Lexikon der Ägyptologie V, col. 189 , fig. 2.
of $\mathrm{R}_{1}$-Gardiner adopts Sethe's interpretation of this emblem as a "spear decked out as standard," but Sethe's evidence actually indicates that the standard bears a feather, viewed from the front; cf. JNES 18 (1959) pp. 270-271, fig. 26 (1). For a much more detailed discussion of this question see Egyptian Studies III, pp. $210-214$. The confusion of $\frac{8}{\&}$ with $\ddagger$ began somewhat earlier than Dyn. XVIII, as pointed out by Hayes, JEA 33 (1947) p. 8 (p), where the Dyn. XIII example he deals with ( $£$ ) evidently combines $\frac{\circ}{q}$ and $\int$. A similar form combines $\lceil$ and $』$ as ( $\ddagger$ ), which occurs on a stela that may be equally early (BM 334; see comments on G2o above); this also appears on monuments from Theban Tomb $1_{5}$, dating to the very beginning of Dyn. XVIII (Earl of Carnarvon and Howard Carter, Five Years'Explorations at Thebes, pl. 12; Sauneron and Vérité, Kêmi 19 [1969], pl. 17).

80 T12-James K. Hoffmeier argues convincingly against the identification of this sign as a bow-string: Newsletter, The Society for the Study of Egyptian Antiquities, Toronto, 6/3 (May, 1976) pp. 6-11.

A 25 -A curious Old Kingdom variant in known from Giza and Abusir: 面 or see Egyptian Studies III, pp. 214-216.

ANN T26 A particularly detailed hieroglyph is to be found in the tomb of K3.i-gm.n.i at Saqqara. The adjacent drawing is from a photograph made by Alexander Badawy; cf. the very inexact version in Pierre Montet, Scènes de la vie privée (Strasbourg, 1925) p. 53, fig. 12a. The
 duck's head reappears in an ivory model of such a trap (MMA 30.8.221): N. E. Scott, $B M M A 35$ (1940) pp. $163^{-164}$, and Wm. C. Hayes, Scepter of Egypt II (New York, 1959) p. 215 . Cf. the detachable decoy in the early N.K. trap shown by Carnarvon and Carter, op. cit., pl. 64 (with p. 7o).
$\llbracket$ T28-The round-bottomed form also occurs very sporadically (along with the normal form) in the earlier Eighteenth Dynasty: Tylor, Tomb of Renni, pl. 5 (in the name $R\ulcorner-n-h r w . f$ ); Rekh-mi-Rer, pls. 86, 89; Private Tombs I, pls. 4, 6. Also Abydos I, pls. 62, 63 (fragments from the temple of Amenophis I). And at least one Middle Kingdom occurrence may be cited: Munich Gl. W.A.F. 35 (K. Dyroff and B. Pörtner, op. cit., pl. 2).

E U30-Some examples of Dyns. IV-V at Giza show the form $\rrbracket$, with a single pellet on the top: LD II, pl. 33; Hassan, Gîza II, figs. 213-214, 218, 219 ; IV, figs. 119, 124; VI/3, fig. 26. This detail may be compared with the single pellet on the basket of 显; see the comments on Ag above.

- V2—An odd Middle Kingdom variant on Louvre stela C3, line 5 (Wm. K. Simpson, Terrace of the Great God at Abydos [New Haven, 1974], pl. 15) assimilates the horizontal element to the arrow of $\mathrm{h}^{2}$ (F29); cf. the writings of $s t 3 / s t 3$ quoted by Raymond Faulkner, Concise Dictionary of Middle Egyptian (Oxford, 1962) pl. 255.
( V32-It is not quite accurate to say, as Gardiner does, that the ties are omitted in examples earlier than Dyn. XVIII. The ties appear in a Dyn. III example ( $H z y-R$ : Cairo GG 1426), and at least two other Old Kingdom examples are known, one shown here (from Wild, Ti II, pl. 124), the other in Firth and Gunn, Teti Pyramid Cemeteries, pl. 56. Similar examples are also known from the early Middle Kingdom (Lacau and Chevrier, Une Chapelle, terminal pl. XIX; Fischer, Egyptian Studies II, fig. 21 [GG 20539]), both from the reign of Sesostris I. But the ties are lacking in line i , b 8 , of the latter, as Gardiner points out, and also in another inscription of the same reign, quoted by Clère, RdE 22 [1970], p. 46 ; so too in Petrie Abydos II, pl. 25, dating to the end of Dyn. XI, and perhaps in Newberry and Griffith, Bersheh I, pl. 17 , for which see BiOr 36 [1979], col. 24). The gradually more frequent
 addition of this detail was probably reinforced by the pattern set by 请 ( $\mathrm{W}_{1}$ ) and $-\left(\mathrm{Y}_{1}\right)$ in the Middle Kingdom.
$\circlearrowleft$ V37—Middle Kingdom forms are discussed by Wm. Ward, The Four Egyptian Homographic Roots B-3 (Rome, 1978) pp. 166-169; these and older forms are discussed by Edel in Studies Presented to Hans Jakob Polotsky (East Gloucester, Mass., 1981) pp. 378-389. For a further example of Old Kingdom of see Egyptian Studies III, pp. 216-219.
([]) $\mathrm{W}_{4}$ —The addition of $\sigma$ to $\sqrt{7 \pi}$ (see $\mathrm{O}_{22}$ above) dates from the beginning of the Fourth Dynasty, and the two signs only gradually became fused after the Old Kingdom. During the

Middle Kingdom the forms $\sqrt{7 / 7}$ and were occasionally interchanged. See Egyptian Studies III, pp. 208-209.
§ W14-There are several variants of this sign, the most common of which shows a projecting stopper at the top of the jar $(\mathbb{\S})$ or a flat-topped cap $(\mathbb{\S})$ : the first is known from Dyns. IVXII, more rarely later, while the second is known from Dyns. VIII-XII. Other variants show a spout. For details see Egyptian Studies III, pp. 219-222.

瞵 Y3-In the earliest detailed examples, such as the one shown on the title page of this volume, the thin case for the reed pens has a plain cap at either end. But the top of the case soon, as early as the reign of Cheops in Dyn. IV, began to show vertical striations (the example shown here is from Simpson, Kawab, Khafkhufu I and II, fig. 27 [reversed]). In later examples these striations tend to become more everted, finally curling outward on either side. Fur-
 ther details are given in Egyptian Studies III, pp. 222-225.
$\backsim \mathrm{Y}_{5}$ —An Eleventh Dyn. variation at Bersha shows legs beneath the gameboard: Egyptian Studies III, pp. 225-227.

自 Aa2o-The Middle Kingdom variant (d) also occurs in A. De Buck, Egyptian Coffin Texts I (Chicago, 1935) p. 86 (from Assiut).

## Sources of figures and supplementary references

An asterisk $\left({ }^{*}\right)$ indicates that a hieroglyph has been reversed in the figure.

c Jéquier, Monument funéraire de Pepi II, II, pl. 108.
Middle Kingdom exx. of a and b: Lacau and Chevrier, Une Chapelle, pls. 14-15. Middle Kingdom exx. of c: Cottevieille-Giraudet, Médamoud (I93I): Les Monuments du Moyen Empire, pl. 34.
a Borchardt, Grabdenkmal Śashhu-re厄 II, pl. 29.*
b H. Carter and P. E. Newberry, Tomb of Thoutmosis IV (Westminster, 1904) pl. 1.
In an early Old Kingdom example, Junker, Gîza I, pl. 23, the land-sign is detached from the bottom. In the Ramesside period the lower part of this sign is assimilated to the papyrus in 88 ( $\mathrm{M}_{2} 4^{*}+$ M13); e.g. Calverley, Temple of King Sethos I, IV, pl. 17. This is wrongly identified as "tige de lotus" by G. Lefèbvre, Grammaire de l'égyptien classique (2nd ed., Cairo, 1955) p. 4 o 3 (24a).

EGYPTIAN STUDIES III: VARIA NOVA
1996. Cloth; xxxiii +264 pp., 48 duotone plates, numerous drawings in the text. $91 / 2 \times 12^{1 / 2}$."

The aim of this book is twofold: first, to provide beginning students with step-by-step guidance in drawing hieroglyphs; and secondly, to supplement the observations of Gardiner in the Sign List at the back of his Egyptian Grammar.

The examples include all 24 of the common forms of "alphabetic" (monoconsonantal) signs, and a selection of other signs that are either difficult to draw or that call for additional com-ment-a total of about 200 in all. Comparative material, emphasizing Old Kingdom models, is presented in 175 line drawings. By familiarizing themselves with this material, along with the points made in the Introduction, students will, at the same time learn a good deal about hieroglyphic palaeography.

[^0]:    1. There is, however, a semi-cursive style of hieroglyphic writing which, incised on stone, wood or metal, approximates the same kind of simplification, reducing forms to linear thinness (cf. p. 5 below [6]). Mention is made of this style in reference to
[^1]:    2．This list does not include hieroglyphs of the Eighth Dynasty and the Heracleopolitan Period（Dyns．IX－X）which

[^2]:    3. From the mastaba of Ti , for which one should now consult the newer publication in Mémoires de l'Institut français d'Archéologie orientale du Caire (Cairo) Vol. 65, and especially the second and third fascicles, admirably executed by Henri Wild. M. Wild planned to publish an additional fascicle devoted to palaeogra-
[^3]:    phy, but this project was forestalled by his death.
    4. See also the extensive tabulation of colors of Old Kingdom hieroglyphs, pp. 366-382.
    5. Note that A47 should be labeled A49, and that the example of $\mathrm{D}_{4} \mathrm{o}$ is Late Period.
